White, 1657.

A New

ALMANACK

And Prognostication for the Year of our Lord God, 1657.

Being the first from Bissextile, or Leap year.

Wherein is shewed the natural inclination of the air, and Judgement of the weather, according to the Aspects of the Planets, and positions of the Stars.

With other Rules, Tables, and Directions, Convenient in such a work to be noted.

By William White.

Calculated for the Meridian of *Todington* in *Bedford* shire, Where the Pole is Elevated 52 Degrees and 8 Minutes.

LONDON,
Printed by Robert White, for the Company of *Stationers*. 1657.

The beginning and ending of the Terms with their Returns and Essoin dayes, dayes of exceptions, returna Brevium, and dayes of Appearance, for this year, 1657.

Return dayes or dayes of Essoin.		Dayes of Exception.		Returna Brevium.		Dayes of Appearance.	
Hilary Term begins January 23 and endeth the 12 of *February*, and hath four Returns.

The Anatomy of mans body, as the parts thereof are governed by the Moon in the twelve Signs.

♈ Aries, Head and Face.

♉ Taurus, Neck and Throat.

♋ Cancer, Breast, & Stomack.

♍ Virgo, Bowels & Belly.

♏ Scorpio, Secret Members

♑ Capricorn. Knees.

♊ Gemini, Arms and Shoulders.

♌ Leo, Heart and back.

♎ Libra, Reins and Loyns.

♐ Sagitarius. Thighs.

♒ Aquarius. Legs.

♓ Pisces, the Feet.

Physical Elections.

Good to
- Vomit
- Take Glisters
- Take Gargarisms
- Take Preparatives
- Stop Rheumes and Fluxes
- Purge by neesing

The Moon or Sign in

♈ ♌ ♐
♉ ♍ ♑
♊ ♎ ♒
♋ ♏ ♓

Fit times for Blood letting.

The Sanguine, from the new Moon to the first quarter.
The Cholerick, from the first quarter to the full.
The Flegmatick, from the full to the last quarter.
The Melancholy, from the last quarter to the change.

Dangerous times for blood-letting.

In the heat of Summer, or cold of Winter, or when the Moon is in the sign which governeth that part of the body, one would let blood: Also within two days of the change, or full of the Moon.

The common Notes and movable Feasts

For this year, 1657.			For the next, 1658.

A brief Description of the particular things contained in this Almanack.

IN the Almanack are 8 Rows or Columns in each moneth; The first is the number of days; the second, the days of the Week; in the third are the Festival days, and other both fixt and moveable; the beginning and ending of the Terms, with the change of the air; the 4 is the Age of the Moon; the 5 is the motion of the moon (or the Signs, as we call it through the Zodiack) the fixt is the New, Full, and Quarters of the Moon; the 7 is the time of high water at *London* Bridge.

As for example, the 10 day of *January*, being *Saturday*, the Moon is 6 days old, and the sign is in the head, and that day it is high-water at *London* Bridge, at 7 a Clock at night.

The glorious Planet *Venus* is our evening Star all this year to the 24 day of *June*, and from thence to the 17 day of *April* the next year, 1658. She is oriental, or our bright morning Star, shining very bright in the morning before the rising of the Sun.

January hath xxxi days.

Warm Meats, thick cloaths, This Moneth are good; No Phisick, Baths, or letting blood.

1 Day sun riseth at 8 and 3 min. sets at 3 and 57 min.
15 Day sun riseth at 7 and 44 min. sets at 4 and 16 min.

Lately extant, *France* painted to the Life, in four Books by a Learned and impartiall hand; To be ſold by *W. Leake*, at the Crowne in Fleet-Street.

Take notice that thoſe famous Lezenges approved for the cure of Conſumptions, Coughs, Catarrhes, Aſthmaes, and all deſeaſes, incident to the Lungs, are onely made by Mr. *Edmond Buckworth* at his houſe in *Katherins* Court, near the Tower, and for more conveniencie to thoſe that live Remote in the City, quantities of them ſealed up with his Coate of Armes, are left conſtantly with Mr. *Richard Lownds* a Bookſeller at the White Lyon near the little North-door of S. *Pauls* Church.

A Geographicall epitomie of the Map of Engla and WALES, wherein is shewed how each Shire bounded and joyned to each other, and what Point of th: Compass every County lyeth from the Honourable City of London; (being lately published) the use of which, and the next Table, is explained, on the back side of the other leaf.

You may read after the next leaf the whole compass, length and brea of England and Wales, with the chief Islands of note belonging to the sam also the compass, length, and breadth of Ireland: but for Scotland, it is h to be measured, the Islands being so many, barren and scattered, be above 300.

An alphabeticall Catalogue of all the Shires, Cities, Market-Townes Castles, Parishes, Rivers, and Parks, in everie particular Shire in England and Wales; with the distance of miles, and points of the compas from London.

FIrſt for the Map: The figures in each ſhire of the map, are to ſhew you the names of every County, & the Letters in the ſame are for uſes, as I will ſhew hereunder.

You muſt underſtand that London is in Middleſex, which County of Middleſex hath the figures of 22 in it, & the little black ſpeck. or ſpot therein ſignifieth London. Now if you would readily find the name of any Shire therein, and how many myles the middle of the ſaid County (in a ſtreight line) is from London, & what poynt of the Compaſſe it lyeth from the ſaid City; reſort then to the Table of Shires on the other ſide, and it will reſolve you.

As for example, Barkſhire it hath the figure of 1 in the map, & ſo it hath likewiſe in the Table; where is ſhewed that the middle or heart of that Shire is 40 myles from London in a ſtreight line, & it lyeth full weſt from the City, and looking forward toward the right-hand, it ſheweth it hath no City, 11 Market-Towns, 2 Caſtles, 140 Pariſhes, 3 Rivers, & 13 Parks. Again, Buckinghamſhire hath the figure of 3 in the Map, & ſo it hath before it in the Table, the heart or middle of which ſhire is from London 35 myles, & lyeth North-weſt & by weſt from the ſaid City, it hath no City, 11 Market-Towns, no Caſtle, 185 Pariſhes, 2 Rivers, and 15 Parks; and ſo of the reſt.

The uſe of the Letters in the Map is this, Scotl. ſignifieth part of Scotland, I part of Ireland, F part of France, M the Ile of Man, W the Ile of Wight, L the Lizard point, H Holy-head, the * the Iriſh Sea, B the Britiſh or Engliſh Sea, G the German Sea, Ba Barwick, D Dover, N Newcaſtle, C the poynts of Compaſſe, S the Scale of Myles, by which you may meaſure the diſtance of any place, for every black degree is five myles, ſo is every white.

The 39 Shires from Barkſhire to Yorkſhire are the Engliſh ſhires, & the other 13 from Angleſey, to Radnorſhire are Welſh.

It may be ſomething further in Myles to the middle of each ſhire, by reaſon of the crokedneſſe of the High wayes hills and vallies, but what is here ſet down is meant in a ſtraight line from London, as is ſaid.

The

The Compasse, Length and Breadth of *England*, and the chiefe Ilands thereof.

ENgland is in compasse——————1532. miles.
The greatest length thereof Northwards and Southwards, from Barwick to the Lands end, is—586. miles.
The shortest length from Barwick to Calshot Castle in Hampshire, is——————286. miles.
The broadest place from the Lands end to Sandwich, is——————279. miles.
From S. Davids in the West in Pembrook-shire, through the midst of Worcester and Warwick-shire Eastward to Yarmouth in Norfolk, is——————240. miles.

The Ile of MAN.

The Ile of Man is in compasse——————91. miles.
The length is——————28. miles.
The breadth is——————18. miles.

The Ile of ANGLESEA.

The Ile of Anglesea is in compasse——————85. miles.
The length is——————21. miles.
The breadth is——————18. miles.

The Ile of WIGHT.

The Ile of Wight is in compasse——————57. miles.
The length is——————22. miles.
The breadth is——————11. miles.

The Compasse, Length, and Breadth of IRELAND.

Ireland, reflecting the adiacent Ilands, and some Indraffs, is in compasse——————948. miles.
The length North and South, is——————303. miles.
The breadth East and West, is——————113. miles.

The

The use of the Table of Kings.

This table of the Kings, I suppose may be necessary in the searching out the antiquity of many old evidences, which are dated many times by the years of the Kings then reigning, and not by the years of our Lord.

Example.

How long is it since the 10 year of King James: Which is thus found.

King James began to reign Anno Domini	1602
to which adde the 10 years	10
So it is Anno Domini	1612
which subtracted from the present year	1657
there remains the years since.	45

How to judge what Weather will follow, by the riling and setting of the Sunne.

The Sun rising bright & clear, signifieth a pleasant day: If he rise fiery red, it promiseth rain: if in his rising he be thinly overcast with a cloud, it betokeneth foul weather: if the sun drive the clouds before him into the West, it signifieth fair weather: if at his rising there appear a circle about him, & banish and away equally, it betokeneth fair weather. Also if he setteth red, it signifieth fair weather: If at his setting he be of divers colours, or clouds like water, it threatneth rain. If at the rising of the Sun, his beams seem red, or long, or encompassed with red clouds it signifieth great windes: if at his rising there appear a thick mist, or if it raineth in the evening, it threatneth very foul weather to follow. Also if the Sun beams be spotted either green, pale, or black, or gathered to a cloud, it signifieth rain. The Sun setting clear without any cloud, signifieth a fair night to follow. If the

circle, or circles about the Sun be clear, & of no continuance, look for fair weather: If there be many circles, it signifieth winds: the redder they are, the more vehement winds. If the circles are here & there broken, & are thick & black, look for cold wind or snow: or if he settle behind, a great black cloud, rain follows.

How Weather is foreknown by the Moon.

If the Moon in the third day of her change, or 3 dayes before her full, or in the midst of the quarter, be found of pure light, nothing compassing her, the ends direct up, she promiseth faire weather: but bent to red colour, provoketh winds. The Moon pale, or somewhat black or thick, threatneth rain. When the Moon is five dayes old, mark the lips of her horns, if they be blunt, it signifieth rain: if sharp poynted & pricking upwards, great winds. If in the fourth day after her change, she have a red circle about her, it signifieth winds and rain.

Of the judgment of Weather by the Stars.

If the Stars appear of much light, and seem to be of more bignesse and blazing then ordinary, it betokeneth great windes and moysture in that part where they seem so; and in Winter, great Frosts. When dim Stars appear with long fiery tayles, it threatneth winds, and great drought: the more in number, the greater will be the effect. When when Starres seeme to shoot or fall, it signifieth great winds in that place: If they seem to shoot in divers places, it signifieth divers windes: If in all places, windes, thunder, lightning, and most tempestuous weather.

How to judge of the weather by the Clouds.

Black clouds flying from the east, signifieth rain at night, if from the west, rain the next day; if they flye low: and appeare to settle upon the tops of hills, it is a signe of cold weather, if they be

be full charged, and appear white like towers, hail is at hand: if white clouds appear in winter, two or three days together at sun rising, it is a signe of cold and snow: but black clouds signifie rain. A red sk in the evening, and a gray morning is a sign of a fair day. Mists falling in the morning, in spring or harvest also mists over ponds or waters in the morning shew rain. If the clouds fly swiftly in the ayre, it signifies rain from that part of the heavens, especially from the north or south. If thick white clouds gathered together in many places like flocks, or heaps of wool appear in many places, it is a sign of rain: but if thick dark clouds towards the north or west neer the earth, presently rain, and if like hills a little above the earth, foul weather is over. If mists descend from the hills, and settle in the valleys, it is a sign of fair hot weather next day, or if white mists arise from the waters in the evening.

How to judge of the weather by the Rain-bow.

The natural signification of the Rain-bow, is to shew rain either past or to come. The Rain-bow appearing when it is fair, is a signe of foul weather: when it is foul if it appear, it is a sign of fair weather, the greener it appears the more rain, the redder the more wind; if before noon then the rain is spent; if the rain-bow appear about one or two in the afternoon, then rain is near. A rainbow in the morning is a sign of wet (unlesse there be drought in the air) if it appear in the evening, it is a sign of fair weather (unlesse the air abound with moisture.) A rain-bow at night opposite to the moon, is a sign of much small rain and wind to follow. A rain-bow after long rain is a sign of fair weather presently; if two rainbows appear together, it is a sign of rain within one or two days after.

Difference of the Tides in these places from London.

This Table shews what ☽ makes an high tide at the new and Full, and also the difference of the Tides in these places, from the Tides at London Bridge: Therefore if you adde this difference of any place to the time of high Tide at London any day (as it is set down in the Almanack) so you shall have the true time of the Tide in any of these places. Note if your sum exceed twelve hours, to count onely the overplus.

Of the Eclipses of the Sun and Moon this present year 1657.

The two great Luminaries, that suffer four Eclipses this present yeare, twice the Sun, and as often the Moon: whereof both these of the Moon will appeare at *Todington*, but those of the Sun will not.

The first Eclipse is of the Sun upon the first day of June, neer 10 of the cloth at night, and therefore cannot be seen of us because the Luminaries are under our Horizon, but will be conspicuous in some parts of Mexicana, in Agama, in the extremity of North America, and in the Kingdom of Quivira, &c. but as it is a very small Eclipse, so will it scarse be observable in any part of the habitable world.

The second is an Eclipse of the Moon upon Munday the 5 day of June, and beginneth 40 minutes past 6 at night, the beginning of totall darkneſſe 1 minute past 8, the middle or greatest obscuration 26 minutes past 8, the true oppoſition 30 minutes past 8, the end of totall darkneſſe, 50 minutes past 8, the end and full recovery of light 11 minutes past 10, the Digits Eclipsed are 13 and 6 minutes

The beginning of this Eclipse cannot be seen at Todington, because the Sun is above the Horizon, and the Moon under, notwithstanding the middle and end will there be conspicuous.

The third is an Eclipse of the Sun upon the 25. day of November neer 7 in the forenoon, but will be invisible at Todington, yet may those people (if there be any) in the remote southern parts of the earth (unknown to us) behold it.

The fourth and last is an Eclipse of the Moon upon Thursday the 10 of December which will be visible at Todington, if the aire be cleere.

The beginning of this Eclipse is at 41 minutes past 5 at night, the greatest obscuration 19 minuts past 6, the true oppoſition 57 minutes past 6, the end 57 minutes past 7, the digits Eclipsed are 3 and 42 minutes, the totall duration is 2 hours and 15 minutes.

The

The Explanation of a new and easie [illegible] here following, for this present Yeare, 1657.

NOte that every Month containeth three Rows or Columns (the Figures for the number of dates excepted) The first Columne toward the left hand containeth the Week Dayes and Sunday Letter; the second the Signe wherin the Moon is every day. And the third the Changes & Quarters of the Moon. Note that the being thus O figured, doth signify the New Moon; & placed this Way is the first Quarter: this is the Full Moon: and again this is the last Quarter. Note also that the Figures over the head of the Moon, doe signify the howers of her Change, Full, or Quarters, and the Letters above or beneath, the time after noon, or after midnight, N standing for After noon till Midnight, and M for after Midnight till Noone.

As for example, against the 4 day of Ianuary, being Sunday, I do find the Moon (or Sign) in ♑ Capricorn, or the knees, and is thus O charactered, which is the change or new Moon at one in the afternoon. Again, on March 13, being Friday, I doe find the Moon in Cancer or the breast, and is thus ☽ charactered, which is the first Quarter at 1. in the morning; and so of the rest.

Note also, that at the head of every month is placed the rising and setting of the Sun for the midst of every month: As for example, for the midst of Ianuary, the ☉ riseth at 7. of the clock and 44 minutes; and setteth at 4, and 16 minutes, &c.

It also containeth (on the back side of the Leaf) for every month the Feastes both Moveable and Fixt, with the beginning and ending of every Terme: As Twelf day is on the 6. of Ianuary, Easter day is on the 29. of march & thirt. Sunday is on the 17 of May. Terme begins on the 29 of May, and endeth on the 17 of June, &c.

A briefe and easie Almanack for this Yeare 1657. which being cut out, is necessary to be *placed into any Book of Accompts, Table-book,* or other, conteyning the whole Kalendar, in a short method; By William White.
